

KLINGER BALLOSTAR® KHA

3-piece ball valves DN 10 - 125

KLINGER FLUID CONTROL

Today for tomorrow

As a subsidiary of the KLINGER Group, KLINGER Fluid Control has been developing, manufacturing and maintaining high-quality industrial valves at the business location Gumpoldskirchen/Austria for more than 125 years. Via the global distribution and service network, KLINGER Fluid Control offers both standardized and tailored products, services as well as solutions for customers around the globe.

Products from KLINGER Fluid Control are characterized by their high level of reliability as well as by an above average lifecycle at a simultaneously very low total cost of ownership (TCO). As a solutions partner, KLINGER Fluid Control creates customer benefits with added value. In this regard, the focus is on the following core competences:

ENCOMPASSING SERVICE

- » Application expertise
- » Product trainings
- » Fast quotation and order processing
- » Customer-specific logistics concepts
- » Supply of spare parts
- » Valve maintenance
- » On-site technical support

INNOVATIVE SOLUTIONS

- » State of the art development tools
- » Product development for different areas of application
- » Compilation of customer-specific special solutions
- » Automation solutions
- » Product tests in the company-own technical center
- » A wide range of certificates and approvals

OPERATIONAL EXCELLENCE

- » Flexible production
- » Transparency in the supply chain
- » Short delivery times
- » ISO 9001 certified quality
- » ISO 14001 as well as EMAS certified environmental management system

CONSISTENTLY MODULAR

One product – many applications

PRODUCT ADVANTAGES

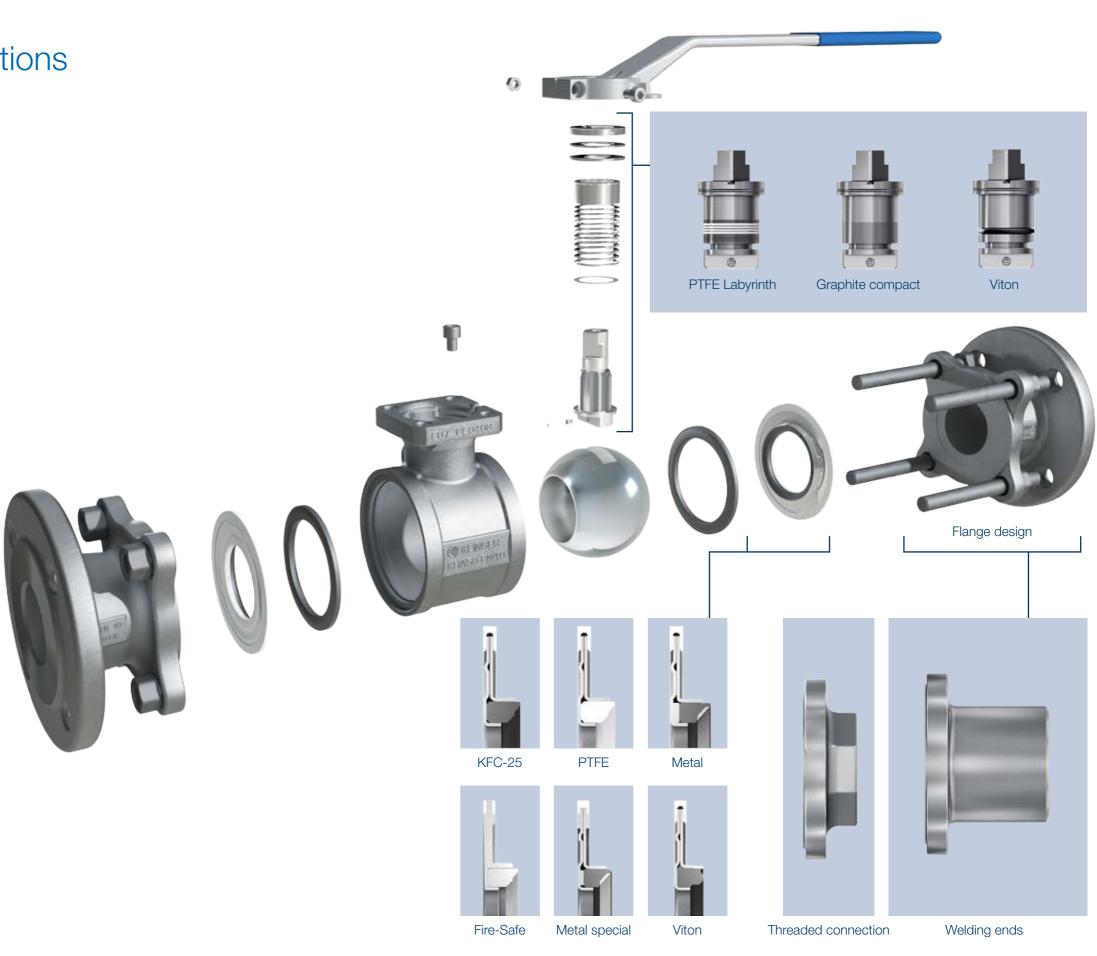

- » Maintenance-free
- » Supports pressurization on both side
- » Bidirectional flow
- » Ball with a cylindrical full bore
- » Unique pre-stressed and elastic sealing system
- » Bidirectional sealing in accordance with EN 12266 leakage rate A
- » Modular selection of system components
- » Serviceable without removal from the line
- » Antistatic design in accordance with ISO 7121 / EN 1983
- » Subsequent automation possible at any time (top flange in accordance with EN ISO 5211)

SPECIAL TYPES

- » Metal seat (up to +400 °C) for abrasive media
- » Operating stem sealed by O-rings
- » Operating stem extension
- » Oxygen version (oil, grease and silicone-free)
- » Cryogenic version (down to -196 °C)
- » Fire-Safe version
- » Vacuum version
- » Gas version

PRODUCT DETAILS

| PN | 16/25/40/63/100 |
|----------------|--|
| DN | 10 – 125 / 20R15 – 150R125 |
| Housing | Cast steel, stainless steel, grey cast iron, nodular cast iron, special materials upon request |
| Ball | Stainless steel |
| Operating stem | Stainless steel |
| Temperature | -196 °C to +400 °C |
| Design | Flanges (long, short), threaded connections, welding ends (long, short), full and reduced bore |
| Туре | Three-piece ball valve |
| .) | |

GREATEST SAFETY

The unique KLINGER sealing system with automatic sealing chamber

Leakages represent the worst case for any plant operator. Negative impacts on the environment as well as downtimes, harm to personnel and assets and in some cases heavy financial losses are just a few of the possible outcomes. A seal, which therefore "practices what it preaches", i.e. a valve capable of reliably fulfilling its shut-off function, is a must. With the KLINGER Ballostar® KHA, this is ensured in multiple ways: By means of the unique ball valve sealing system and the automatic sealing chamber.

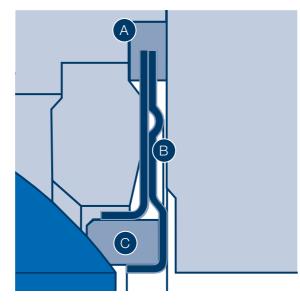

CERTIFIED QUALITY

The KLINGER Ballostar® KHA lives up to its promises

This is proven by various tests and certifications - for plant operators this means absolute safety in operation with guaranteed tightness.

THE SEALING SYSTEM

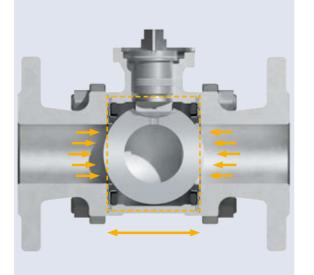

- A The sleeve reliably keeps the sealing element in the desired position. In the Fire-Safe design, a graphite ring adds additional protection against too high thermal loads.
- B The diaphragm spring determines the sealing stress for the entire lifecycle of the seal and simultaneously ensures the required pressure of the sealing ring. As a consequence, the seal remains - independent of the medium pressure and the flow direction - continuously tight.
- C The sealing ring itself is surrounded on three sides by the springloaded sealing element and can therefore absorb major loads without deformation.

THE AUTOMATIC SEALING CHAMBER

The automatic sealing chamber utilizes spring loads in the two sealing elements for the function of the valve. The result: An automatic sealing chamber, in which the loads of the sealing elements simultaneously work bidirectionally. On the basis of this principle it is also possible to replace two unilaterally sealing standard valves. Primarily, this concerns safety lines in plants, especially those with alternating flow directions.

In the case of the KLINGER Ballostar® KHA, as opposed to conventional ball valves, the absorption area of the medium pressure is not limited to the ball area, but encompasses the entire sealing element (ball and area of the diaphragm spring). In the event of an increase of differential pressure, the additional forces increase as well - the preloaded diaphragm springs, which press against the ball, are subsequently relieved and service life further improved.

» Valve according to "TA-Luft"

With a standard value of 10⁻⁴ mbar I/s, the KLINGER Ballostar® KHA significantly outperforms the requirements of the German Technical Instructions on Air Quality Control.

» Fire-Safe

The Fire-Safe tests in accordance with API Standard 607, 4th Edition and EN ISO 10497:2004 have been certified by the TÜV Austria.

» Valve for gaseous fuels

Due to its product characteristics, the KLINGER Ballostar® KHA can be tested as a safety shut-off installation for firing systems in accordance with the European Norm EN 161. Certification for selected types, in combination with special actuators, can be issued on demand.

» Valve for utilization with oxygen

The BAM Berlin has approved the KLINGER Ballostar® KHA for the utilization in combination with oxygen.

» Valve for gas supply

Certificate on the authorization to bear the ÖVGW gas quality trademark.

» Emission testing in accordance with VDI 2440

Certified emission testing pursuant to VDI 2440 for the KHA labyrinth stuffing box at room ambient temperature and at temperatures \geq 250 °C. Testing of the KHA O-ring stuffing box (Viton) at ambient room temperature.

» Standard antistatic

The KLINGER Ballostar® KHA features standardized antistatic equipment in accordance with ISO 7121 and EN 1983 respectively. An antistatic ball ensures electrostatic discharge from DN 50 upwards.

» Operational safety

The KLINGER Ballostar® KHA has a fitting for the installation of a locking device as a standard feature. This negates unintended utilization.

» 3.1 Final inspection certificate

In order to ensure quality, application safety and guaranteed tightness for the operator, the KLINGER Ballostar® KHA is standard-issued with a final inspection certificate on the basis of the norm EN 10204 - 3.1.

SUSTAINABLE EFFICIENCY

Reliability across the entire lifecycle

The KLINGER Ballostar® KHA is characterized by its low costs across the entire lifecycle of the valve (TCO) as well as by its high durability. As a result of its modularity, only affected components need to be replaced in the course of maintenance. This significantly increases the operating time of the valve in the system. For the operator, this means lower costs with regard to plant maintenance, stock keeping as well as installation - at continuously high safety levels. With its unique design, the KLINGER Ballostar[®] KHA also offers plant operators the flexibility, which dynamic markets demand today: Thanks to a wide range of modular system components, which can be individually combined among themselves, the ball valve can be equipped, refitted or retrofitted for each application case.

SIMPLE MAINTENANCE WITHOUT **REMOVAL FROM THE LINE**

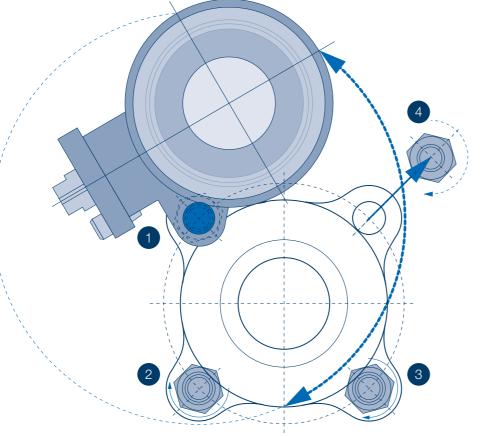

During maintenance and service work, the nuts 1-3 need to be removed with the bolt. The remaining nut (4) is only loosened. This allows the core element of the valve to be swung out without major effort and removal from the line, while simultaneously providing access to the two sealing elements in the bore. These can also be easily removed and replaced. Changing the stuffing box seals, removal of the ball and the operating stem (applies to the models KHA SL, SK and G) is also carried out in a very user-friendly manner.

Replacement part: Ball

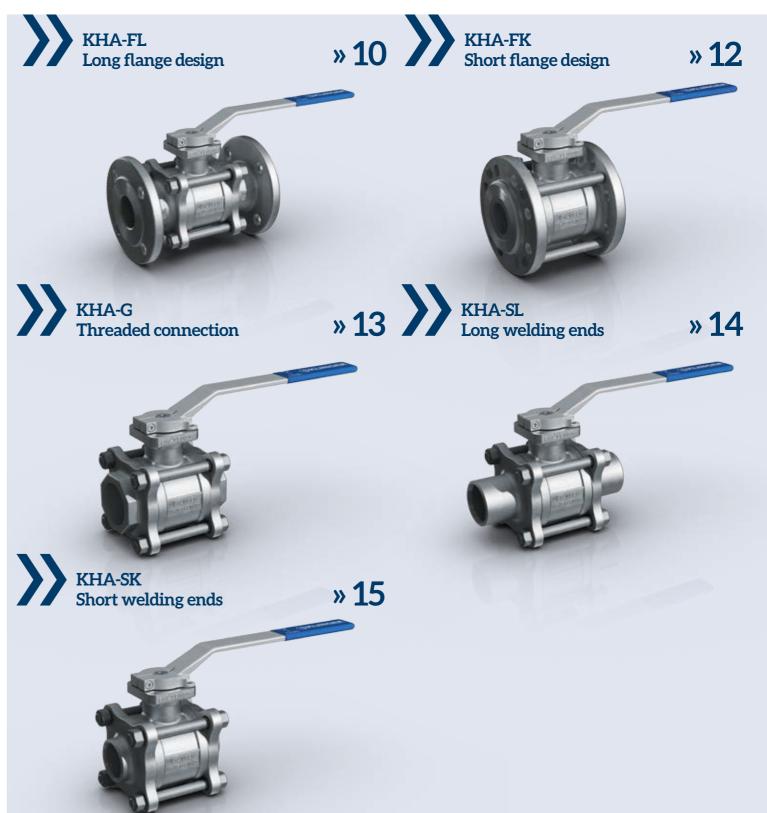

Replacement part: Sealing elements

BALLOSTAR® KHA

Overview of types

BALLOSTAR® KHA-FL

Long flange design

GENERAL FEATURES

- » 3-piece ball valve with full or reduced bore
- » Floating ball, antistatic, lockable
- » Double tightness in both directions
- » Modular system components

CONNECTIONS

Flange in accordance with EN 1092-1 (VIII, Xc) Flange in accordance with EN 1092-2 (III)

DIMENSIONS

Face-to-face dimensions in accordance with EN 558-1, series 1

ACCEPTANCE TESTING

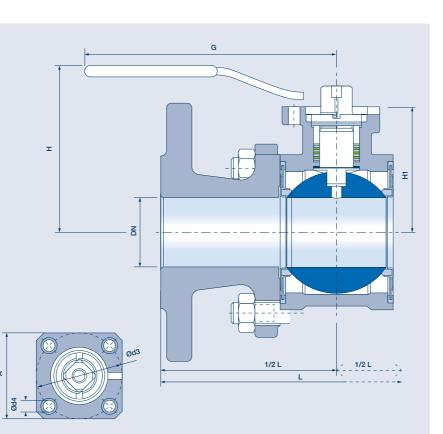

- » Seat leak tightness: EN 12266-1 P12, leakage rate A
- » Tightness to atmosphere: EN 12266-1 P11
- » Strength: EN 12266-1 P10

AUTOMATION

Flange connection in accordance with ISO 5211, allows for direct mounting of an actuator or by means of brackets. Pneumatic and electrical actuators utilizable.

TEMPERATURE

-196 °C to +400 °C (see pT diagram)

Mounting flange for

actuator

Weight

kg

Schematic representation: reduced bore

DN

Dimensions

BALLOSTAR® KHA-SK

Short welding ends

GENERAL FEATURES

- » 3-piece ball valve with full or reduced bore
- » Floating ball, antistatic, lockable
- » Double tightness in both directions
- » Modular system components

CONNECTIONS

Welding ends in accordance with DIN EN 12627

DIMENSIONS

Face-to-face dimensions in accordance with DIN EN 12982, series 67

ACCEPTANCE TESTING

- » Seat leak tightness: EN 12266-1 P12, leakage rate A
- » Tightness to atmosphere: EN 12266-1 P11
- » Strength: EN 12266-1 P10

AUTOMATION

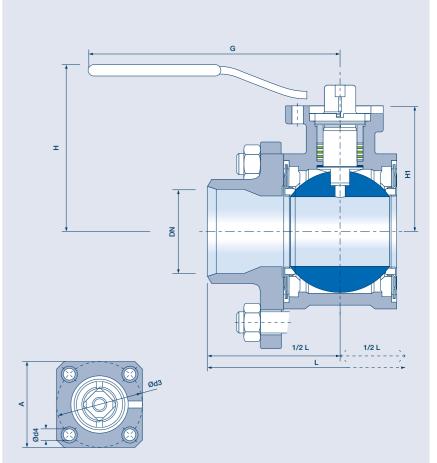

Flange connection in accordance with ISO 5211, allows for direct mounting of an actuator or by means of brackets. Pneumatic and electrical actuators utilizable.

TEMPERATURE

FULL BORE

REDUCED BORE Material: Steel casting 1.0619 (Material code VIII)

-196 °C to +400 °C (see pT diagram)

AREAS OF UTILIZATION

Pressure and temperature ranges

The pT diagrams illustrate the influence of the three body materials, the sealing materials and the actuator shafts on the area of utilization of the ball valve.

This represents safety at the highest level. Insert your operating point into the diagram fields and you will identify whether your safety reserves meet your requirements. At

Grey cast iron

Material code Xc

the same time, you will see which parameters may require further change. Carrying out your selection on the basis of this principle, you will optimize the cost-effectiveness of your valve.

3 If the operating pressure reaches a maximum of 25 % of the nominal pressure, the safety range of the valve increases to -85 °C. Actuator shafts made of the material A4-70 also represent a pre-requirement

In case the operating pressure drops into the nominal pressure range, the application field in the temperature range

For standard computations, KLINGER recommends the factor 1.5, i.e. using plus 50 %. With regard to ball valves with reduced bores, the values of the preceding row, i.e. a smaller nominal diameter, must be taken into account.

FLOW VALUES

| DN (mm) | ζ | \mathbf{K}_{vs} -value |
|---------|-------|--------------------------|
| 10 | 0.35 | 6.8 |
| 15 | 0.23 | 18.8 |
| 20 | 0.20 | 35.8 |
| 25 | 0.14 | 66.8 |
| 32 | 0.12 | 118 |
| 40 | 0.11 | 193 |
| 50 | 0.10 | 316 |
| 65 | 0.076 | 607 |
| 80 | 0.067 | 980 |
| 100 | 0.058 | 1,645 |
| 125 | 0.051 | 2,742 |

| 150R125 | 0.30 | 1,642 |

1 bar at the valve.

In metric measurement systems the characteristic unit utilized is the K_y-value. In countries using inches, the characteristic unit is described by means of the cV-value. It provides how many US gal/min of water, at a temperature of 60 °F and with a pressure loss of 1 psi, flow through the valve.

The valve is to be selected in a manner that the K-value is greater, or the ζ -value less than the computed value.

4

PRESSURE LOSSES

$$\Delta p = \zeta * \frac{\rho}{2} * w^2 * 10^{-5}$$

$$\Delta p = \left(\frac{Q}{k_v}\right)^2 * \frac{\rho}{1000}$$

The characteristic unit for shut-off and control valves is the K,-value. The values provided in the table apply to a H₂O flow medium with a temperature of 5 – 30 °C, a density of 1000 kg/m³ and a pressure loss of p =
